

Full-Stack Software Engineer - Ali Shuaib

Windsor, Ontario, Canada | Open to relocation (Canada & U.S Citizen)
+1 437-999-3807 | alishuaib2001as@gmail.com

Full-Stack Software Engineer with experience owning the design and delivery of production web platforms, including secure integrations, data-driven workflows, and reliability-focused backend systems. Comfortable operating end-to-end under tight timelines and evolving requirements.

Experience

Devops & Software Engineer

CloudMetric Inc | Feb 2026 – August 2026

- Enabled 24/7 client coverage by developing voice agents capable of handling after-hours calls, reducing missed business opportunities and reliance on live staffing.
- Built and refined production voice AI agents on LiveKit Agents with FastAPI/SQLAlchemy, adding a real-time observer layer for live agent steering and correction.
- Engineered a fuzzy client name-matching system (Metaphone, Jaro-Winkler, RapidFuzz) to improve CRM identity-resolution accuracy.
- Automated business processes via n8n and Notion API, including a probability-of-close calculator and optimized Notion-to-Postgres ETL sync.
- Wrote test suites for voice AI agents using LiveKit's testing framework and researched GraphRAG architectures (Neo4j, LangGraph) for pipeline design.

Automated Grading & Feedback Platform - Orbite

Full-Stack Software Engineer

July 2023 – Feb 2026

- Designed and built an end-to-end, production-grade web platform from scratch, owning frontend architecture, backend services, data modeling, and deployment.
- Delivered and operated a live system used by real institutions, supporting instructors and students in active classroom environments with automated grading and feedback workflows.
- Built secure third-party platform integrations using OAuth- and JWT-based authentication, enabling trusted identity resolution, role-based access, and protected session handling.
- Designed AI-assisted grading pipelines with human-in-the-loop safeguards, allowing instructors to review and approve generated grades and feedback before publication.
- Improved performance and reliability for international users, optimizing database queries, reducing payload sizes, deferring non-critical data loading, and resolving backend memory issues caused by large media uploads.
- Implemented scalable media handling and storage workflows, including upload limits, preprocessing, and cloud-based file storage to support large student submissions safely.
- Shipped rapid improvements under tight semester-based timelines, incorporating instructor, student, and administrative feedback while maintaining system stability and grading integrity.

Computer Science Instructor (Part-Time)

Ontario Academy of International Education | Jan 2023 – Present

- Taught project-based computer science courses covering Python, JavaScript, and TypeScript, guiding students through building complete web applications.
- Mentored students on software design, debugging, and code quality using modern frameworks such as React and Next.js.
- Designed practical curriculum emphasizing problem-solving, maintainable code, and real-world development practices.

Data Analyst Intern

Altair | May 2023 – Sep 2023

- Built internal tools and LMS plugins using PHP and JavaScript to support AI-assisted learning and content workflows.

- Developed product demonstrations showcasing data preprocessing and applied machine learning techniques for internal and client-facing use.
- Created automation tools integrating LLM-assisted workflows to reduce manual content creation effort and improve team efficiency.

Web Developer

Moonlite | Oct 2022 – Dec 2022

- Developed client-facing web applications using TypeScript, React, and Tailwind CSS for e-commerce and marketing.
- Collaborated with non-technical stakeholders to translate business requirements into production-ready features.
- Delivered multiple projects on tight timelines, balancing quality, usability, and client expectations.

EdTech Research Assistant

University of Windsor | Oct 2022 – Dec 2022

- Supported the university's LMS migration by building custom frontend components and internal tools to improve usability and documentation.
- Conducted user experience research and implemented interface improvements based on student and staff feedback.
- Improved internal workflows by redesigning forms and data exports for administrative teams.

Projects & Systems Built

Real-Time Interactive Mapping Platform - NGS Map

Full-Stack Software Engineer

June 2022 – Present

- Designed and built a real-time, interactive web application enabling a community of users to collaboratively discover, annotate, and vote on shared map-based resources.
- Developed a responsive frontend using React, TypeScript, and Tailwind CSS, focusing on usability, accessibility, and smooth interaction for frequent state updates.
- Implemented backend services and APIs to manage user-generated content, permissions, and data persistence.
- Added real-time synchronization features using WebSockets to support live map updates and community interactions without page refreshes.
- Improved performance and discoverability through targeted optimizations and SEO/accessibility audits, supporting an active community of ~2.5k users.

Skills

Languages: TypeScript, JavaScript, Python, SQL

Frontend: React, Next.js, Tailwind CSS

Backend & APIs: Node.js, Express, REST APIs, Authentication & Authorization (OAuth, JWT)

Databases & Storage: PostgreSQL, MongoDB, Vector Databases, Cloud Object Storage (S3)

Cloud & DevOps: AWS, Docker, Linux, CI/CD

Real-Time & Data Processing: WebSockets, Background Jobs, Data Pipelines

AI-Assisted Systems: Human-in-the-loop workflows, Automated Evaluation Pipelines, LLM-assisted Applications

Education

Bachelor of Business Administration and Computer Science, Minor in Applied Information Technology

University of Windsor | September 2019 – April 2023
